## X - Can you add this?

Given two integers, calculate and output their sum.

## Multiple Test Cases

The input contains several test cases. The first line of the input contains a positive integer $Z \leq 100$, denoting the number of test cases. Then $Z$ test cases follow, each conforming to the format described in section Single Instance Input. For each test case, your program has to write an output conforming to the format described in section Single Instance Output.

## Single Instance Input

One line containing two space separated integers $x$ and $y\left(x, y \in\left[-10^{9}, 10^{9}\right]\right)$.

## Single Instance Output

For each test case, output one line containing the sum of the corresponding integers.

## Example

|  | Input |  | Output |
| :--- | :--- | :--- | :--- |
| 4 |  | 0 |  |
| -100100 |  | 5 |  |
| 23 |  | 110101 |  |
| 0 | 110101 |  | -999999999 |
| -1000000000 | 1 |  |  |
